

Impact Report 2024

We're excited to share insights into our journey in Indonesia and Uganda over the past year – from the milestones we've reached to the challenges we've faced.

The purpose of this report is twofold: on one hand, it provides a compact overview of our work, challenges, and achievements in 2024. On the other hand, it allows us to reflect on and learn from these experiences.

Meet Hairin, the smallholder farmer depicted on the cover. Find out more about him and our cocoa value chain work on page 8.

EMPOWER FARMERS & FORESTS!

Dear Readers,

With this impact report we would like to take you along on our journey - showing the progress we made in our Reforestation Efforts in Uganda and Indonesia. As you might have realised from our title story, we do have exciting news to share about Cocoa in Indonesia!

While we are proud of the achievements of our work, still, we have to be honest with ourselves: 2024 was a politically turbulent year on the global stage. Moreover, it was the first year on record where the global average temperature surpassed the critical 1.5°C mark. What we need now is real commitment and a clear stance - along with stories that show: it is still possible to change course.

At Fairventures, we are determined to be part of the change. To shift the narrative and keep the global perspective front and center, we see this report as an opportunity to let our teams and the local communities in Uganda and Indonesia share their thoughts, stories, and lived experiences - building personal, human connections around the most urgent issue of our time.

With best regards, Megan & Wolfgang

Check out the video message for you!

Wolfgang Baum

We don't just plant trees, we empower farmers to plant the future. We invest in teaching local farmers about reforestation and equip them with all the necessary skills to make a living out of it. Creating responsible value chains for farmers and their harvest is as essential as planting the trees.

We openly communicate about our setbacks and successes. We believe that today's failures are opportunities for learning tomorrow. We responsibly manage our resources, taking proactive actions and testing different approaches to find solutions, rather than dwelling in theory or failure.

The well-being of the planet and humanity are inseparably linked. Realistic reforesting means to listen to the local communities needs in order to succeed for the planet. That's why we offer sustainable income perspectives as an alternative to environmentally harmful mining, palm oil fields or the exploitation of the rainforest.

We learn from each other and listen attentively. In doing so, we consider not only our own but especially the needs, fears, and hopes of local people. Our growth is continuous, and we remain open to new ideas, rather than assuming we always know best. Together with communities in Indonesia and Uganda, we continuously evolve and achieve sustainable success.

2016: Opening of the Indonesia Country Office

2019: Founding of Fairventures Social Forestry

2023: Starting the Climate Education Program "Climate Stories"

2018: Opening of the Uganda Country Office

2021: Founding of Fairventures Digital GmbH

2023: Founding of Good Forest Indonesia Foundation

FAIRVENTURES FAMILY

Fairventures Worldwide is a non-profit organization based in Stuttgart with country offices in Uganda and Indonesia. We empower smallholder farmers in the tropics to generate income through reforestation, creating sustainable forests that produce timber and food. To support our holistic agroforestry approach and enhance transparency, we utilize modern monitoring technologies such as the TREEO app.

Our sister company Fairventures Social Forestry (FSF) combines the implementation of a sustainable climate solution with a green return on investments. By implementing sustainable agroforestry in cooperation with local communities in Indonesia, FSF creates positive ecological, social and financial impact at the same time.

To help set companies on the path to net-zero (emissions), TREEO (Fairventures Digital) provides them with traceable and reliable data about high-quality CO2-Removals while empowering tree growers through the TREEO Technology and giving them access to the carbon market.

We strongly believe that development belongs in the hands of local people. Therefore, we have adjusted our organisational structure. After more than 10 years of work in Indonesia, we have supported our Indonesian team in establishing their own organisation, the "Good Forest Indonesia" (GFI) Foundation.

GOOD FOREST INDONESIA

Supporting Local Leadership

In an increasingly connected world, sustainable development must take place and grow from within local communities themselves. Running a Fairventures office for 10 years in Indonesia has led us to reflect extensively on our reforestation journey. That is why we are proud to support the transition of our office in Indonesia to a fully independent organization. Late in 2023, we entrusted the Indonesian team to establish their organization under the name of "Yayasan Good Forest Indonesia" or Good Forest Indonesia Foundation.

Since then the Indonesian team is no longer operating as a branch office of Fairventures Worldwide, but as a fully equal partner. GFI stands as an independent NGO. GFI was founded by Monalisa, our interim country director in Indonesia, and is led by Fadhillah Hanum, our prior administration and finance manager, as the new director.

"It gives our local team more space to lead, design solutions that fit our context, and respond quickly to what's happening on the ground. For the communities, it builds deeper trust and strengthens their long-term involvement in the forest restoration work that Fairventures Worldwide started here over a decade ago. Even though we're now independent, we still share the same vision as FVW. This transition allows FVW to grow its network in new places, and we see ourselves as part of that bigger mission, contributing to the broader impact from right here in Central Kalimantan."

- Monalisa, GFI's Founder.

This transition is certainly not without challenges. However, it is also an opportunity to strengthen the foundation of the organization, encourage innovation, and foster a stronger sense of ownership among all team members. The establishment of Good Forest Indonesia as an independent organization marks a new phase for the Indonesian team.

Page 06

The 2024/2025 planting season marks the first season fully led and implemented by GFI. While this is not the first time the GFI team has led a planting season, the team's enthusiasm is evident in the way they present themselves to the public. This confidence is captured in a short video created by the GFI team. What makes this video particularly special is that it was produced entirely by our field team - the very people who work closely with farmers and local communities every day and without anyone asking them to make a video in the first place.

The transition reflects our commitment to ensuring that development initiatives are led by people who best understand their local context. The Indonesian team is those closest to the daily challenges in this reforestation journey, as well as finding the right and sustainable solutions. When an organization is led by local communities, decisions made will be based on a deep understanding of the culture, beliefs, and needs of the community. This not only creates a sense of ownership but also builds a strong foundation for long-term accountability.

As a global partner, we believe that impact does not come from the top down, but rather grows together from trust and mutual understanding. Through this step, we are confident that this transition will not only strengthen the organization but also strengthen local voices and leadership in facing major challenges such as climate change, food security, and sustainable natural resource management.

"Autonomy isn't just about working independently - it's about owning your vision, staying responsive to your local context, and building something that truly reflects your reality. It's not always easy, but it creates space for genuine innovation and impact. Stay grounded in your values, keep learning, and don't be afraid to take that step. The journey to autonomy can strengthen not just your team but the whole ecosystem around you."

- Monalisa, GFI's Founder

COCOA & REFORESTATION

How Cocoa combines tree planting and income generation

We believe that reforestation is more than just planting trees. We practice reforestation through an approach that is ecologically, socially, and economically sustainable. This approach is implemented through agroforestry. Agroforestry means that smallholder farmers grow both trees and crops on the same land, increasing the land's value while providing short- and medium-term income opportunities.

One of the crops we promote is cocoa. Besides offering environmental benefits, cocoa grows quickly, holds high economic value, and thrives in agroforestry systems.

Why Cocoa?

Cocoa is not new to the lands of Kalimantan. For about ten years, farmers have already experimented with growing cocoa. However, cocoa is not an easy crop to cultivate - it requires careful and consistent care.

Cocoa plants are vulnerable to pests and diseases. They require regular pruning, thinning, and fertilization. Moreover, cocoa needs shade trees to grow well.

Post-harvest, the beans must be processed and fermented according to specific standards to produce market-acceptable quality beans. While cocoa has high potential to grow in Kalimantan's soil, many farmers lack the facilities, knowledge, and experience to manage it properly. Recognizing this, we began exploring how cocoa's value chain could serve as a sustainable source of income - especially since cocoa suits agroforestry systems ideally. This led to the creation of the Kalteng Cocoa Program, designed to support cocoa farmers in Central Kalimantan.

The Cocoa Value Chain Development

Launched in 2021, the program partners with farmers in East Barito and Gunung Mas regencies. Along the way, we've worked not only with farmers but also with government officials, offtakers and chocolate producers and cocoa cultivation experts to strengthen the cocoa value chain in Central Kalimantan. As of May 2025, the price of cocoa has reached almost 8 Euro per kilogram, and participating farmers now produce an average of 40 kilograms of cocoa beans per month. The cocoa farmers we support come from diverse backgrounds. Yet this diversity has not stood in the way of their eagerness to learn. During training sessions, every participant listens attentively and engages fully. One key initiative is the Cocoa Farmer Field School, where farmers gather to learn about cocoa cultivation, soil health, and postharvest processing.

Seeing the abundance of cocoa beans produced from the farmers' land means that what we have taught and nurtured as BPP officers together with Good Forest Indonesia signifies a success that has been achieved." - Hariani, Agricultural Extension Officer of East Barito

Farmer Field Schools are not one-way lectures, but two-way dialogues. Farmers are encouraged to share their own methods of farming—often based on books or online tutorials—and exchange insights with each other. These shared experiences are then enriched with the technical training provided by our team.

Beyond cultivation techniques, the Farmer Field School is also a space to share knowledge about environmental stewardship. The planting and care practices taught in the program are environmentally friendly and rooted in agroforestry principles. Farmers are also encouraged to plant other tree species such as jengkol, petai, and sengon. Cocoa motivates farmers to plant trees - thus it is an excellent addition to our reforestation tool set.

The growing enthusiasm among cocoa farmers continues to inspire us. Their commitment is proof that cocoa cultivation can become a reliable source of income, one that not only enhances livelihoods but also contributes to long-term sustainability for people and the planet.

IN UGANDA

The driving force and big challenge

Uganda has two rainy seasons – one from March to May, and another from September to November. During both, we have planted trees in the past years.

However, climate change has increasingly disrupted these patterns, leading to unpredictable weather and delays in planting. Many regions have been forced to adapt to these challenges, as the timing of rainfall becomes less reliable.

As climate change continues to alter traditional weather patterns, some regions have been forced to delay planting. Unpredictable rainfall has caused setbacks. To tackle these challenges head-on, we are analyzing rainfall patterns and working towards a system that reacts flexibly to conditions in the planting areas, so we can plant trees when the conditions are right.

BIG NEWS

James Thembo and Patience Namara now lead a Team that grew to over 40 Members and supported over 6.500 Farmers since the opening of our office in Uganda.

CO-COUNTRIY DIRECTORS
JAMES THEMBO & PATIENCE
NAAMARA

One team member dedicated to empowering smallholder Farmers is Edith Muhindo. When she joined Fairventures Worldwide in 2019 as a Farmer Trainer Facilitator (FTF), she didn't just start a new job – she stepped in a space where few women dare to go.

Since then, she has been a vital bridge between Fairventures and smallholder farmers, ensuring their voices are heard and their needs are met. As an FTF, Edith is not just sharing knowledge: She is empowering communities and opening doors for others to follow.

One of her most valued lessons came from Fairventures' unique approach to monitoring impact in tree-growing projects. "I had never heard of single tree monitoring," she admits. "Learning that every single tree can be tracked and reported on has made me so proud of my work."

Juggling fieldwork and family responsibilities is never easy, especially for a woman in a maledominated field. Forestry fieldwork often comes with stereotypes that women are not suited for the job. These remarks can be discouraging, especially during field monitoring or recruitment. But instead of backing down, Edith is determined to prove otherwise.

"I keep wondering what perception it creates for young people. They may end up running away from forestry, thinking it's really for men and a very difficult career."

- Edith Muhindo, FTF at Fairventures Worldwide

Edith is not stepping away. If anything, she is standing even taller as a symbol of what is possible when passion meets purpose. Her story is more than just a personal journey. It's a call to reimagine what forestry looks like and who belongs in it. Edith Muhindo is inspiring the next generation of women to take up space in forestry with confidence.

Page 12

FROM SEEDLINGS TO SCHOOLYARDS

How are Work is strengthening Community Development

In Uganda, we work with a broad network of nurseries -including our own and those run by dedicated local partners. The Community Nursery in Bwera is a powerful example of how this collaborative approach strengthens communities and creates lasting impact beyond reforestation. Located in the Kasese District in western Uganda, the Bwera Nursery has been partnering with Fairventures Worldwide since 2021.

Through this collaboration, the nursery has not only supplied us with high-quality seedlings but has also created a stable source of income.

With the profits generated, the nursery team turned an ambitious dream into reality: building a primary school for children in the community.

In many rural areas of Uganda, access to education is limited - mainly because of the long distances to the nearest school. At the same time, the number of school-aged children has steadily increased. The community in Bwera decided to take action.

The construction of the school is entirely community-funded, driven by the nursery and its primary school partners. Much of the funding comes directly from income earned through the sale of tree seedlings. To guide and oversee the developments, a school management committee of 13 local parents was formed. Many of these parents are smallholder farmers actively involved in our reforestation efforts.

This inspiring initiative highlights the lasting impact of our work. It shows how a steady, reliable income stream can empower local communities to lead change and create opportunities for the next generation.

At Fairventures Worldwide, we are proud to support efforts like this one. They show us that our mission - to empower farmers through reforestation and responsible value chains - can grow into something even greater: thriving, resilient communities that shape their own future.

TAKING RESPONSIBILITY

Our Partnership with STIHL for Forests & Farmers

We are proud to share exciting news about our partnership with STIHL, one of the world's leading manufacturers of power and garden tools.

Since 2017, STIHL has been supporting our mission to empower smallholder farmers and restore degraded landscapes in Uganda and Indonesia. We strengthened our collaboration in 2022, launching the largest project in Fairventures' history. The goal: Reforesting areas that will absorb approximately 120,000 tons of CO_2 over time.

The pilot phase was successfully completed by the end of 2024, marking an important milestone in our collaboration. Our partnership has not only allowed us to expand our impact but also helped us to grow as an organization. Together, we have refined our standards, asked the tough questions, and learned from both successes and setbacks.

An important tool in this process has been the TREEO application, developed by our sister company Fairventures Digital. With TREEO, we can track the location and growth of each tree, as well as estimate the amount of CO_2 stored in the biomass – making our reforestation efforts more transparent and measurable.

Together with STIHL, we remain committed to empowering farmers, restoring forests, and creating lasting impact for people and the planet.

CLIMATE STORIES

Our award-winning format connects young people across continents

Our project, Climate Stories, brings together students in Germany and young people from the Global South. The goal is to make the climate crisis more relatable by allowing those affected to share their stories, concerns, and hopes, motivating and encouraging young people to take action through their engagement.

In 2024, our reach nearly doubled:

We facilitated encounters with 556 students (launch year 2023: 282 students), led by 5 climate witnesses from Egypt, Brazil, Uganda, and Indonesia in 32 workshops (2023: 16). We are especially pleased with the following feedback from participants:

- 88% now have a better understanding of the issue of climate justice.
- 75% want to get involved in climate justice in the future.

In October 2024, Climate Stories received an **NRW Media Award** for innovative development education. The jury recognized our use of video and social media to reach new target groups – and praised the authenticity of our face-to-face encounters.

"The exchange with peers from the Global South makes climate change suddenly feel real and personal."

- David Wortmann, Founder of DRW ECO

Later that year, we were also nominated for the PRIO1 Climate Award, which celebrates creative youth-led initiatives in the field of climate action.

© Marvin Ruppert

We would like to thank our supporters – SEZ BWirkt (funded by the state of Baden-Württemberg), the Heidehof Foundation, and the Umverteilen foundation – for making this work possible.

Stay up to date!

Follow our social media channels to discover inspiring Climate Stories from around the world – shared on a regular basis! From powerful personal stories to innovative climate solutions, we the people making a real difference in the fight for climate justice.

Don't miss out – join the global conversation and get inspired!

UPDATE TEAM INDONESIA

With Good Forest Indonesia officially operating as an independent organization since 2024, we have decided that the number of employees at GFI will no longer be included in Fairventures

Worldwide's impact report.

TEAM UGANDA

Full-time Employees: 42
Part-time Employees: 0
Interns: 1

Uganda

TEAM GERMANY

Full-time Employees: 4
Part-time Employees: 6
Working Students: 1

Stuttgart

Climate funding

In 2024, it became clear that the positive, can-do spirit that emerged by the Fridays for Future movement was fading in Germany. Economic concerns, the war in Ukraine, and disrupted supply chains took priority. We saw a marked decline in donations and new partnerships, as companies and individuals are hesitant to dedicate funds to climate change mitigation in this situation. This is why we are all the more grateful for our many existing supporters who are standing by us even in challenging times.

El Niño

El Niño, a naturally occurring climate pattern in the tropical oceans, challenges our work every few years by disrupting weather patterns. During El Niño years, Indonesia experiences drier-than-usual conditions, while Uganda sees more rain, sometimes too much. Unfortunately, this phenomenon is exacerbated by climate change, and 2024 was a particularly wet year in East Africa, while our planting window in Indonesia was shorter than ever before. The tree planting teams adapted admirably and reached their goals, but the level of disruptions is expected to increase in the near future.

Monitoring & Replanting

In 2024, we monitored every single tree that we have planted since 2023. The data gives us a clear picture - which trees are thriving or struggling, which species fit best where, and why some seedlings don't make it through the stages of production, distribution, and planting. Based on our data, we are currently replanting lost seedlings — often using species that are even better suited to the local conditions of the planting area. Compared to the limited publicly available data from other projects (of other organisations), our mortality rates are acceptable. However, they are still high enough to make replanting a real challenge. Over the coming years, as we continue to reduce these rates, the need for replanting will gradually diminish.

Timber Value Addition

In Indonesia, the first generation of trees is now reaching harvestable age - a moment we have been eagerly awaiting. Our original strategy was to harvest and sell them to the wood processing industry, particularly for use in panel materials. Unfortunately, high transport costs make this a challenging prospect (we shared these challenges in our 2023 impact report). Following this setback, we're focusing our efforts on new product ideas and sales channels for the farmers - with the goal of finding a fulfilling solution for all parties included.

"Within our foundation network,
Fairventures has initiated one of the most
diverse working groups. Through our close
collaboration, I have not only learned a
great deal about reforestation and life in
Indonesia and Uganda, but also witnessed
the passion, dedication, and expertise they
bring to their work. Their constantly
evolving ideas and the way they
collaborate as equal partners continue to
impress me."

Jule Fiedler, Communications Manager at Stiftungsnetzwerk Region Stuttgart e.V.

At epicPLY, sustainability isn't just a buzzword – it's a core part of our company philosophy.
That's why we're especially proud to partner with Fairventures Worldwide.

Together, we're making a bold statement for climate-positive wood production: for every tree used to manufacture our lightweight panels, Fairventures plants six new ones.

This partnership allows us not only to offer high-quality products, but also to actively support reforestation and climate protection – exactly where it's needed most. We're proud to be part of this impactful cycle and to take responsibility for future generations.

Sustainability starts with the right choice – for your product and for the planet.

Julian Ludwig, CEO, epicPLY

'In Central Kalimantan, I've witnessed how sustainable agriculture and community-driven initiatives can cultivate not just crops, but also resilience and hope. Working with Good Forest Indonesia and Fairventures Worldwide has shown me the power of collaboration—where hands-on experience, youth capacity building, and local empowerment come together to sow seeds of lasting change."

Cohyo Muthi, Cocoa Value Chain Manager Good Forest Indonesia

"Being part of Fairventures has been a journey of growth and purpose. It's inspiring to work with a team that truly believes in restoring forests and empowering communities in Kalimantan."

Lisca Amelia Putri, Value Chain Manager Good Forest Indonesia

VOICES

from Uganda & Indonesia

Each tree planted is a promise to the future, a gift to the Earth that blooms with life. In its roots, we find the strength of the past, and in its leaves, the hope of tomorrow. The beauty of planting a tree lies in its quiet, eternal growth.

Susan Maraka, Human Ressources, Fairventures Worldwide Uganda

I am passionate about trees, especially the indigenous ones, because they are resistant to diseases and pests, they provide a conducive environment and bring fresh air and also provide shade"

Collin Mugabi, Head of Field Operations Fairventures Worldwide Uganda

We decided to implement another chapter to our impact report, in which we share our goals and strategies for the upcoming year. For 2025, we still see much potential in the creation of new sustainable income opportunities.

While exploring new income streams requires time and careful testing, we are excited about patchouli - a plant with strong demand in the cosmetics industry -that could become an important part of our agroforestry efforts in Indonesia in 2025.

Moreover, we aim to empower our Ugandan team to build on the success of Good Forest Indonesia. In 2025, we will remain fully engaged in supporting our colleagues as they take the next step: establishing Good Forest Uganda.

Building on the success of our educational work, we are now opening Climate Stories to companies and organizations. The idea is simple – and powerful: If these stories move students, they will also resonate with teams and decision-makers. In 2025, we are piloting our first corporate formats – including a workshop with consulting firm Roland Berger. These interactive sessions bring the voices of Monalisa, Hilda, Jobod & Co. directly into the workplace: via live video dialogues, inspiring talks, and hands-on workshops.

Whether as a keynote speech, leadership impulse or CSRD-relevant workshop – Climate Stories supports a value-driven, inclusive and climate-conscious company culture. Our formats strengthen CSR and internal communication, and they are easily integrated into events, trainings, and cross-departmental initiatives.
